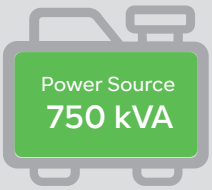
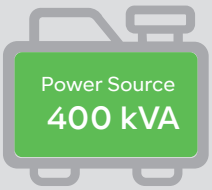
Choosing the right generator solution

Assumed Load for System Design: Peak Power: 600kW, Rated Power: 260kW

If a Diesel Generator is used as the power source:

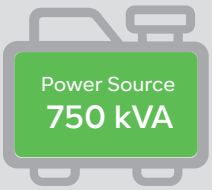


- An initial overpurchase of a high-power DG is required to accommodate the maximum starting current of the motors.
- High fuel consumption is inevitable due to frequent motor startups and prolonged operation at low power.
- Conventional diesel generators do not support capacity expansion.
- High maintenance costs caused by frequent motor starts and significant inrush current.



- Not suitable because of the load's high inrush current.

NORMAL PROPOSAL



- There's no need to purchase a high-capacity DG thanks to the shared power output from the XGen.

&

XGen PROPOSAL

- Reduced upfront investment for a low-power DG.
- Reduced fuel consumption.
